PROFILE

Three products I have built are live: a bilingual coaching platform on web, iOS and Android; a field-service system two companies use daily in Saudi Arabia and Egypt; a vehicle rental booking site. I built each one **alone** — schema, API, front end, mobile app, payments, deploys. Computer Science student at Sheridan. Looking for a **Summer 2027 software developer internship or co-op**.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL, C#, Swift
Frontend	React, React Native, Next.js, Expo, Tailwind CSS, HTML/CSS
Backend	Node.js, NestJS, Firebase Cloud Functions, REST APIs, Prisma
Data	PostgreSQL, Supabase, Firestore, row-level security, schema design
Cloud & Tools	AWS (EC2, RDS), Google Cloud, Vercel, Docker, Git, GitHub Actions, Stripe, Vitest
Design	Figma, responsive and bilingual (RTL/LTR) interface design

EXPERIENCE

Founder & Software Developer — North Via Tech Mar 2025 – Present | Ontario, Canada

Design, build and maintain three production products for paying clients — architecture, data model, web, mobile, payments, deployment and post-launch support.

- **Recovery Space** — bilingual Arabic/English coaching platform live on web, iOS and Android. Programs, session booking, daily check-ins, in-app messaging and push notifications; Stripe payments. Monorepo shares types and data access across web and mobile.
  Next.js · React Native (Expo) · Supabase/PostgreSQL with row-level security · Stripe
- **FieldBase** — white-label field-service platform in daily production use by two clients in Saudi Arabia and Egypt. Offline-first technician app syncs without duplicating work using idempotency keys; tenant isolation enforced in the database rather than the application.
  NestJS · Prisma · PostgreSQL · AWS (EC2/RDS) · Docker
- **HOJ Rentals** — vehicle rental booking with an admin panel; customers manage bookings through an expiring signed link with no account. Closed a price-tampering flaw by computing every quote server-side from the vehicle record.
  React · TypeScript · Firebase Cloud Functions · Firestore
- Work directly with client leadership on requirements, demos, acceptance testing and staff training; run staged releases with tested rollback paths.

Web Developer — Pyramine Investment Aug 2021 – Jun 2023 | Mississauga, ON

- Rebuilt the company website on WordPress and Elementor with custom HTML, CSS and JavaScript where the page builder fell short; built campaign landing pages and kept them current.
- Set up Google Analytics and on-page SEO, and built the contact and lead forms feeding the sales team.

PROJECTS

FixNext — Sheridan Datathon 2026, IBM "Before the Breach" track Nov 2026

- Built in 24 hours with a team of four: a model ranking IBM's benchmark of 72,670 vulnerabilities by how likely attackers are to exploit them.
- Back-tested in time (train 2024, predict 2025): found **19 of 39** later-exploited vulnerabilities in the top 500, against 17 for the strongest industry baseline and 11 for EPSS; 15 against 10 in the top 100.
  Python, LightGBM, IBM Granite embeddings. Live dashboard at fixnext.select.

EDUCATION

Honours Bachelor of Computer Science (Mobile Computing) — Sheridan College Expected 2028

Diploma, Computer Systems – Software Engineering — Sheridan College 2022
